EDUCATION

•Bachelor of Technology in Computer Science and Engineering

2021-25

Kalinga Institute of Industrial Technology, Bhubaneswar

CGPA: 8.4

PERSONAL PROJECTS

•Deep Packet Inspection

C++, FastAPI, React, Docker, GitHub Actions

[Live link](#) | [GitHub](#)

- Built a multithreaded packet-inspection engine in C++17 from raw sockets up, writing custom byte-level parsers for Ethernet, IPv4, TCP/UDP, and TLS ClientHello (SNI extraction) with zero external networking libraries.
- Architected a load-balancer → fast-path thread-pool pipeline using consistent hashing on the 5-tuple (src/dst IP, port, protocol), guaranteeing every packet in a connection is processed by the same worker thread and preserving flow-state correctness under concurrency.
- Implemented a lock-based producer-consumer queue (mutex + condition variables) for zero-busy-wait packet hand-off across reader, load-balancer, fast-path, and writer threads.
- Built flow-granular traffic control (IP/app/domain blocking) that propagates block decisions across an entire connection once flagged, mirroring real-world ISP/enterprise traffic-shaping systems.

•CascadeLog – Hybrid Log Classification System

Three-tier NLP/ML log classification pipeline cascaded by pattern complexity

[Live link](#) | [GitHub](#)

- Designed a cascaded classification pipeline (regex, sentence-transformer embeddings with logistic regression, LLM fallback) that routes each log line by pattern complexity, minimizing LLM calls.
- Shipped as a full-stack app: FastAPI backend, React/Vite frontend, Dockerized with GitHub Actions CI/CD; deployed on Render and Vercel.
- Technology Used: Python, FastAPI, sentence-transformers, scikit-learn, Groq, React, Docker.

EXPERIENCE

•Oracle EPM Implementation Consultant

May 2025 - Present

LTIMindtree

Bengaluru

- Implement and configure Oracle EPM Cloud modules for enterprise clients, working across functional requirements gathering, configuration, and testing cycles.
- Collaborate with cross-functional teams to translate business planning and reporting requirements into system configurations.
- Automated budget variance commentary in Oracle EPM Cloud by building a Groovy business rule that detects significant variances, invokes an AI service to generate natural-language explanations, and writes the summary directly into the EPM commentary cell — deployed for a live client engagement

•AI/ML Trainee

Dec 2023 - Feb 2024

CTTC

Bhubaneswar

- Built and evaluated machine learning, deep learning, and NLP models in Python for predictive analytics and classification tasks.
- Developed a computer vision-based face recognition system using OpenCV and deep learning techniques.

TECHNICAL SKILLS AND INTERESTS

Languages: Python, C++, Java, SQL, JavaScript

Libraries/Frameworks: Pandas, Numpy, Matplotlib, scikit-learn, Tensorflow, Keras, PyTorch

Databases: ChromaDB, PostgreSQL, MongoDB

ML/LLM: MLOPs, MLFLOW, LangGraph, Langchain

Fundamentals: Data Structures and Algorithms, Object-Oriented Programming System, Operating Systems, Computer Networks

CERTIFICATION

•Artificial Intelligence and Machine Learning
